

3G DUAL Sump ~ Sump Guard ~ Auxiliary Power Supply

- The DUAL Sump – Sump Guard powers the Ebara EPPD pump in a power outage. The DUAL Sump – Sump Guard is a power converter using 12VDC battery power (not included) and converts it to 115VAC when standard power fails.
- Easy installation requires no modification or piping changes. Just plug the Sump Guard into an 115VAC outlet and the Ebara EPPD pump(s) into the Sump Guard.
- Fully automatic charging system monitors battery level
- With the DUAL Sump's 115VAC, 1250 Watt, 10+ Amp output, the Ebara EPPD sump pump with 4 Amp motor will run up to 24 hours on one fully charged 12VDC 100 Amp-hour battery. An additional battery can be added for extended operation.
- Optional alarms signals homeowner if the second pump operates (in a dual pump installation) or if a high water level condition exists.

Ebara EPPD Sump Pump Features:

- Ebara model EPPD sump pump in stainless steel construction with non-intrusive float switch and 1/3 Horsepower, 115VAC, split-capacitor, air filled motor.
- High efficiency with maximum flow (2340 gph at 10 ft lift) and minimum horsepower (**only 4 Amps** at 115VAC). The Ebara pump uses approximately one-half the power required by conventional sump pumps.
- Small profile and unique float switch allows for two pumps to be installed in a standard sump basin (pit) without the concern of float switch “hang-up”.
